<u>Thermal and Electromagnetics simulation – Part # HF467-600M-40AH – Current rated 40A @ 1kHz</u>

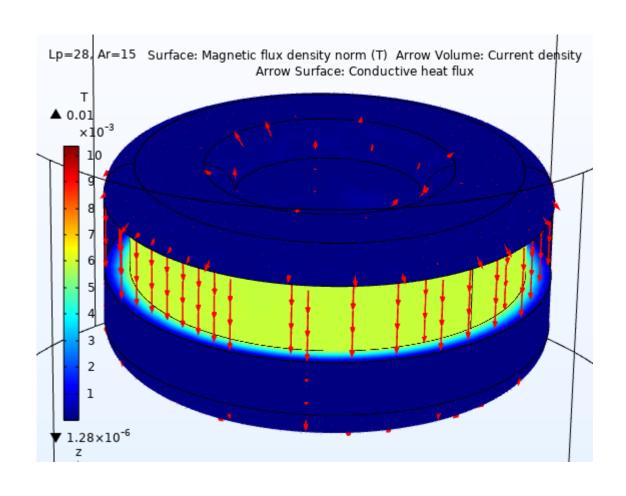

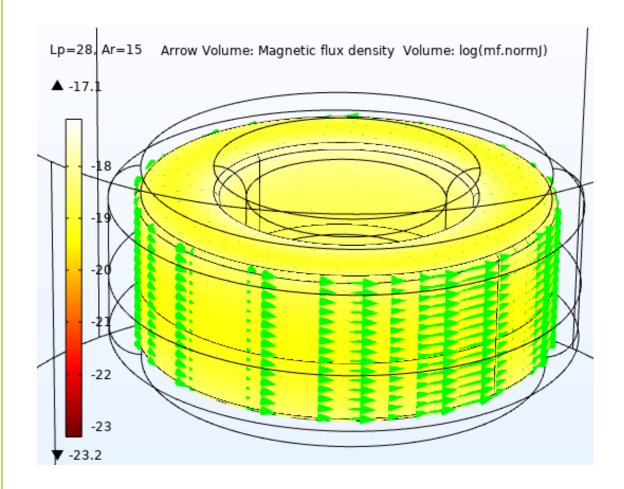

Magnetics Flux in Coil

Magnetic Flux in Core

Abbreviations

Ld : Current rated Amps

Ar : Airflow

W/m².K : Watts / Sq meter .Kelvin – Heat Convection rate

m/s : Meter/ Second - Airflow

degC : Temperature in Deg C

T : Tesla – Magnetic Flux density

Temp : Temperature

Temp max: Temperature Maximum

Amb : Ambient Temperature

Amps : Ampere Load current.

Slice : Sectional view

Note: For the modeling purpose the winding is considered as homogenous multilayer winding.

Disclaimer:

⁻Simulation MODEL is an effective tool for evaluating product performance by simulation; however, it does not simulate product performance in all test environments and is not intended to be a replacement for testing of the actual device by means of a test board or otherwise.

⁻ Simulation results are for reference purposes only; CUSTOMER shall perform thorough testing using the actual device.
